ZhongXun Topin Locator Communication Protocol

Introduction

1. This document focuses on the functional protocols associated with the locator and the server, as well as their data format and content

2. The agreement only applies to the communication between the locator and the server, the current version of the corresponding time is 2017 May, if the future changes, and then make the appropriate adjustment of the document

3. All communication data format is 0x780x78 + data length + protocol number + data content + 0x0d0x0a, the data length of the data content for the number of bytes and the number of bytes occupied by the agreement number. A special number is not the rule in the details of the agreement in the corresponding description

4. All communication data is transmitted through the tcpip protocol, the server address is _____ port is _____

5. A part of the protocol data is sent in two directions, that is, the data is initiated by the device or one of the servers, and one party is required to reply to a reply data of the corresponding protocol. There is a part of the agreement is one-way, that is, after the equipment or server is issued, the party does not need to reply to the data. If there is no special description, protocol data are unidirectional, that is, the party receiving the data does not need to reply to the data.

6. The sample data is all hexadecimal

Details

0x01 login

The device is sent to the server

Start bit 2byte packet length 1byte protocol number 1byte IMEI 8byte software version number 1byte stop bit 2byte

Eg.7878 0A 01 0123456789012345 01 0D0A

Eg.7878 12 10 0A03170F3217 9C 026B3F3E 0C22AD65 1F 3460 0D0A

Date time: 0A03170F3217, the date of the day and seconds, each accounted for 1byte, converted over March 23, 15:50:23, year plus 2000 is 2010.

GPS data length, visible number of satellites: data length and visible number of satellites each 0.5byte, 9C said: GPS information length of 9, to participate in the number of satellites positioning 0x0c (12) stars

GPS latitude and longitude: 026B3F3E, latitude and longitude each 4byte, said positioning data, latitude and longitude conversion method is as follows:

The gps module output latitude and longitude value is converted into a fraction of the unit, and then multiplied by the converted number of 30000, the multiplication of the results can be converted to hexadecimal.

Such as 22 "32.7658 ', (22X60 + 32.7658) X30000 = 40582974, converted to hexadecimal for 0x02 0x6B 0x3F 0x3E, 22X60 is to turn to'.

GPS speed: occupies 1byte, said GPS running speed, the range is 0x00-0xFF kilometers / hour. Example 1F indicates speed of 31 km per hour.

North and south latitude, east and west, state, course: occupy 2 bytes, the direction of GPS that the direction of operation, 0-360, unit degree, north is 0. The first byte The first six bits of the 8-bit binary represent the state, and the last two bits and the second byte of the 8-bit represent the heading. As shown below

The first byte is the second byte

7 6 5 4 3 2 1 0 7 6 5 4 3 2 1 0

Empty air GPS whether the positioning of things through the north and south latitude

The first byte								The second byte							
7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0
Empty	Empty	Empty	GPS Whether Positioning or not	East-West latitude	North-South Latitude	Course									

0-South latitude, 1-North latitude, 0-East latitude, 1-West Latitude , 0 GPS not positioning 1 GPS positioning

Example inside the course heading 3460, converted to binary 0011 0100 0110 0000, said GPS in the positioning state, east, north latitude, heading is 96 °.
