| 6 Server Response to A10..... | 13 |
| Appendix A - Alarm Code and Alarm Parameter..... | 14 |

1 GPRS Package Format

GPRS uplink (i.e.: Data is sent from tracker to platform) command format:

```
$$<pack-len>,<ID>,<work-no>,<cmd-code>,<cmd-para>*<checksum>\r\n
```

GPRS downlink (i.e.: Data is sent form platform to tracker) command format:

```
##<pack-len>,<ID>,<work-no>,<cmd-code>,<cmd-para>*<checksum>\r\n
```

Remarks:

- ◎ Comma (,) is used to separate data fields, and it is necessary. There is no space before or after comma.
- ◎ pack-len: Package Length, decimal string format, the field of pack-len is {<ID>,<work-no>,<cmd-code>,<cmd-para>}, be careful, comma(,) in front of ID included.
- ◎ ID: Tracker ID, default IMEI.
- ◎ work-no: working number, hexadecimal string format, cyclic accumulation from 1 to 0xFFFF.
- ◎ cmd-code: Command code, or specification of data type.
- ◎ cmd-para: parameter or description of cmd-code, which is described in the following chapters.
- ◎ checksum: checksum of package, 2 bytes hexadecimal string format, XOR of {<pack-len>,<ID>,<work-no>,<cmd-code>,<cmd-para>}.
- ◎ \r\n: End of package, i.e. <CR><LF>.
- ◎ Without specification, multi-byte binary data in cmd-para uses big endian format, i.e. Most Significant Byte first.

2 Applied Models

The document describes the format of position/alarm GPRS data, and it is applied for the following models:

- ◎ Q2

3 GPS Position/Alarm Data Format – A03

\$\$<pack-len>,<ID>,<work-no>,A03,<alm-code|alm-para>,<date-time>,MCC|MNC|LAC|CI,<bat-v>,<bat-level>,<status>,<loc-type>,<gps-info>/<wifi-info>*<checksum>\r\n

Descriptions of position/alarm data:

Example:

A03 supports two types of position data, GPS and WIFI, which is defined by loc-type field. Each position data type has similar format, but different gps-info or wifi-info field after loc-type

When loc-type==0, there is gps-info field in the position package, and field definition:

\$\$<pack-len>,<ID>,<work-no>,A03,<alm-code|alm-para>,<date-time>,MCC|MNC|LAC|CI,<bat-v>,<bat-level>,<status>,0,<fix-flag>,<speed>,<salt-num>,<lat>,<lon>*<checksum>\r\n

Example as below:

\$\$95,866104023192332,1,A03,,210414055249,460|0|25FC|104C,4.18,100,000F,0,A,2,9,22.643175,1
14.018150*75\r\n

When loc-type==1, there is wifi-info in the position package, and field definition:

\$\$<pack-len>,<ID>,<work-no>,A03,<alm-code|alm-para>,<date-time>,MCC|MNC|LAC|CI,<bat-v>,<bat-level>,<status>,1,<wifi-ap1>|<wifi-ap2>...|<wifi-apN>*<checksum>\r\n

Example as below:

\$\$136,866104023192332,1,A03,,210414055249,460|0|25FC|104C,4.18,100,000F,1,94D9B377EB53:-6
0|EC6C9FA4CAD8:-55|CA50E9206252:-61|54E061260A89:-51*3E\r\n

| | |
|-------------|--|
| Field | pack-len |
| Description | decimal string format, the field of <u>pack-len</u> is $\{<ID>,<work-no>,A03,<alm-code alm-para>,<date-time>,MCC MNC LAC CI,<bat-v>$ $<bat-percentage>,<status>,<loc-type>,<gps-info>/<wifi-info>\}$, be careful, comma(,) in front of <u>ID</u> included. |
| Example | 95: the length of ",866104023192332,1,A03,,210414055249,460 0 25FC 104C,4.18,100,000F,0,A,2,9, 22.643175,114.018150" 136: the length of ",866104023192332,1,A03,,210414055249,460 0 25FC 104C,4.18,100,000F,1,94D9 B377EB53:-60 EC6C9FA4CAD8:-55 CA50E9206252:-61 54E061260A89:-51" |
| Field | ID |
| Description | Tracker ID, default IMEI, ASCII string |
| Example | 866104023192332 |
| Field | work-no |
| Description | working number, hexadecimal string format, cyclic accumulation from 1 to 0xFFFF |
| Example | 1, indicates that the value of <u>work-no</u> is 0x0001 |
| Field | A03 |

| Description | Data type specification, which is used to define position/alarm package format. | | | | | | | | | | | | | | | | | |
|-------------|---|--|--|-----|------------|-------------|------|-----|-----------------------------------|---|----------|------------------------------------|---|-------------|--|------|---------|-------------------------|
| Example | | | | | | | | | | | | | | | | | | |
| Field | alm-code alm-para | | | | | | | | | | | | | | | | | |
| Description | Alarm code and alarm parameter, refer to Appendix A; For normal position data, this field is empty. | | | | | | | | | | | | | | | | | |
| Example | Empty, the package is a normal position one. | | | | | | | | | | | | | | | | | |
| Field | date-time | | | | | | | | | | | | | | | | | |
| Description | GMT0 date & time, in format: YYMMDDHHmmss 01 YY: year, value(year – 2000), 2 characters 02 MM: month, value range 1--12, 2 characters 03 DD: day, value range 1--31, 2 characters 04 HH: hour, value range 0--23, 2 characters 05 mm: minute, value range 0-59, 2 characters 06 ss: second, value range 0--59, 2 characters | | | | | | | | | | | | | | | | | |
| Example | 210414055249, means 2021-4-14 05:52:49 (@GMT0) | | | | | | | | | | | | | | | | | |
| Field | MCC MNC LAC CI | | | | | | | | | | | | | | | | | |
| Description | Mobil base station information. ‘ ’ is used to separate each data. MCC, MNC: decimal string format LAC, CI: hexadecimal string format | | | | | | | | | | | | | | | | | |
| Example | 460 0 25FC 104C: Value of MCC is 460; Value of MNC is 0; Value of LAC is 0x25FC; Value of CI is 0x104C; | | | | | | | | | | | | | | | | | |
| Field | bat-v | | | | | | | | | | | | | | | | | |
| Description | Battery voltage, unit V | | | | | | | | | | | | | | | | | |
| Example | 4.18, means battery voltage 4.18V | | | | | | | | | | | | | | | | | |
| Field | bat-level | | | | | | | | | | | | | | | | | |
| Description | Battery level, unit %, 0~100% | | | | | | | | | | | | | | | | | |
| Example | 100, means battery level 100% | | | | | | | | | | | | | | | | | |
| Field | status | | | | | | | | | | | | | | | | | |
| Description | Alarm status or vehicle status, hexadecimal string format, as the following table: | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>bit</th> <th>definition</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0--4</td> <td>CSQ</td> <td>GSM signal strength, range [0,31]</td> </tr> <tr> <td>5</td> <td>Charging</td> <td>Clear when charging cable plug out</td> </tr> <tr> <td>6</td> <td>Battery low</td> <td>Clear when battery normal, or charging cable plug in</td> </tr> <tr> <td>7—15</td> <td>Reserve</td> <td>Reserved for future use</td> </tr> </tbody> </table> | | | bit | definition | description | 0--4 | CSQ | GSM signal strength, range [0,31] | 5 | Charging | Clear when charging cable plug out | 6 | Battery low | Clear when battery normal, or charging cable plug in | 7—15 | Reserve | Reserved for future use |
| bit | definition | description | | | | | | | | | | | | | | | | |
| 0--4 | CSQ | GSM signal strength, range [0,31] | | | | | | | | | | | | | | | | |
| 5 | Charging | Clear when charging cable plug out | | | | | | | | | | | | | | | | |
| 6 | Battery low | Clear when battery normal, or charging cable plug in | | | | | | | | | | | | | | | | |
| 7—15 | Reserve | Reserved for future use | | | | | | | | | | | | | | | | |
| Example | 000F, means <u>CSQ==15</u> | | | | | | | | | | | | | | | | | |
| Field | loc-type | | | | | | | | | | | | | | | | | |
| Description | Position type, it defines GPS or WIFI position data type | | | | | | | | | | | | | | | | | |

| | <p><u>loc-type==0:</u> GPS type, and <u>gps-info</u> define as <u><fix-flag></u>,<u><speed></u>,<u><salt-num></u>,<u><lat></u>,<u><lon></u></p> <table border="1"> <thead> <tr> <th>field</th><th>definition</th></tr> </thead> <tbody> <tr> <td>fix-flag</td><td>A—GPS fixed; V—GPS not fixed</td></tr> <tr> <td>Speed</td><td>Speed, unit km/h</td></tr> <tr> <td>salt-num</td><td>satellite number, update from GPS module data</td></tr> <tr> <td>lat</td><td>Latitude, negative in southern hemisphere, decimal string format</td></tr> <tr> <td>lon</td><td>Longitude, negative in western hemisphere, decimal string format</td></tr> </tbody> </table> <p><u>loc-type==1:</u> WIFI type, and wifi-info defines as <u><wifi-ap1></u>/<u><wifi-ap2></u>.../<u><wifi-apN></u>, five WIFI APs supported maximally; <u>wifi-ap</u> format <u>AABBCCDDEEFF:rssi</u>, means MAC <u>AA:BB:CC:DD:EE:FF</u>, Received Signal Strength Indicator <u>rssi</u>, using ‘ ’ to separate various <u>wifi-ap</u> field</p> | field | definition | fix-flag | A—GPS fixed; V—GPS not fixed | Speed | Speed, unit km/h | salt-num | satellite number, update from GPS module data | lat | Latitude, negative in southern hemisphere, decimal string format | lon | Longitude, negative in western hemisphere, decimal string format | | | |
|------------------|--|---------|------------|----------|------------------------------|-------------------|------------------|------------------|---|-----|--|-------------------|--|------------------|-------------------|-----|
| field | definition | | | | | | | | | | | | | | | |
| fix-flag | A—GPS fixed; V—GPS not fixed | | | | | | | | | | | | | | | |
| Speed | Speed, unit km/h | | | | | | | | | | | | | | | |
| salt-num | satellite number, update from GPS module data | | | | | | | | | | | | | | | |
| lat | Latitude, negative in southern hemisphere, decimal string format | | | | | | | | | | | | | | | |
| lon | Longitude, negative in western hemisphere, decimal string format | | | | | | | | | | | | | | | |
| Example | <p>0: GPS type, “A,2,9,22.643175,114.018150” means GPS fixed, 2km/h, 9 satellites, position 22.643175 °,114.018150 °</p> <p>1: WIFI type, “94D9B377EB53:-60 EC6C9FA4CAD8:-55 CA50E9206252:-61 54E061260A89:-51” means 4 WIFI APs searched, detail as below:</p> <table border="1"> <thead> <tr> <th>WIFI AP</th><th>MAC</th><th>RSSI</th></tr> </thead> <tbody> <tr> <td>94D9B377EB53:-60</td><td>94:D9:B3:77:EB:53</td><td>-60</td></tr> <tr> <td>EC6C9FA4CAD8:-55</td><td>EC:6C:9F:A4:CA:D8</td><td>-55</td></tr> <tr> <td>CA50E9206252:-61</td><td>CA:50:E9:20:62:52</td><td>-61</td></tr> <tr> <td>54E061260A89:-51</td><td>54:E0:61:26:0A:89</td><td>-51</td></tr> </tbody> </table> | WIFI AP | MAC | RSSI | 94D9B377EB53:-60 | 94:D9:B3:77:EB:53 | -60 | EC6C9FA4CAD8:-55 | EC:6C:9F:A4:CA:D8 | -55 | CA50E9206252:-61 | CA:50:E9:20:62:52 | -61 | 54E061260A89:-51 | 54:E0:61:26:0A:89 | -51 |
| WIFI AP | MAC | RSSI | | | | | | | | | | | | | | |
| 94D9B377EB53:-60 | 94:D9:B3:77:EB:53 | -60 | | | | | | | | | | | | | | |
| EC6C9FA4CAD8:-55 | EC:6C:9F:A4:CA:D8 | -55 | | | | | | | | | | | | | | |
| CA50E9206252:-61 | CA:50:E9:20:62:52 | -61 | | | | | | | | | | | | | | |
| 54E061260A89:-51 | 54:E0:61:26:0A:89 | -51 | | | | | | | | | | | | | | |
| Field | checksum | | | | | | | | | | | | | | | |
| Description | checksum of package, 2 bytes hexadecimal string format, XOR of { <u><pack-len></u> , <u><ID></u> , <u><work-no></u> , <u>A03</u> , <u><alm-code>/<u>alm-para></u>,<u><date-time></u>,<u>MCC/MNC/LAC</u>,<u>/Cl</u>,<u><bat-v></u>,<u><bat-level></u>,<u><status></u>,<u><loc-type></u>,<u><gps-info></u>/<u><wifi-info></u>}.</u> | | | | | | | | | | | | | | | |
| Example | <p>75: XOR checksum of “95,866104023192332,1,A03,,210414055249,460 0 25FC 104C,4.18,100,000F,0,A,2 ,9,22.643175,114.018150”</p> <p>3E: XOR checksum of “136,866104023192332,1,A03,,210414055249,460 0 25FC 104C,4.18,100,000F,1,94 D9B377EB53:-60 EC6C9FA4CAD8:-55 CA50E9206252:-61 54E061260A89:-51”</p> | | | | | | | | | | | | | | | |
| Field | \r\n | | | | | | | | | | | | | | | |
| Description | End of package, i.e. <CR><LF> | | | | | | | | | | | | | | | |
| Example | \r\n | | | | | | | | | | | | | | | |

4 Server Response to A03

After receives A03 package, server should sending response package to device. Device resends A03 package every 1min when no response received.

Format of response package: ##<pack-len>,<ID>,<work-no>,A03,<date-time>\r\n

Descriptions of position/alarm data:

| | |
|--|--|
| Example: ##37,866104023192332,29,A03, 210414055250*5C\r\n | |
| Field | pack-len |
| Description | decimal string format, the field of <u>pack-len</u> is {<ID>,<work-no>,A03,<date-time>}, be careful, comma(,) in front of <u>ID</u> included. |
| Example | 37 |
| Field | ID |
| Description | Tracker ID, default IMEI, ASCII string |
| Example | 866104023192332 |
| Field | work-no |
| Description | working number, hexadecimal string format, cyclic accumulation from 1 to 0xFFFF <u>work-no</u> in response package should be the same as uplink <u>A02</u> package; tracker should compare <u>work-no</u> in response and uplink package, and only deletes local <u>A02</u> package which has the same <u>work-no</u> |
| Example | 29, indicates that the value of <u>work-no</u> is 0x0029 |
| Field | A03 |
| Description | Data type specification, which defines response command code |
| Example | |
| Field | date-time |
| Description | GMT0 date & time, format: YYMMDDHHmmss 01 YY: year, value(year – 2000), 2 characters 02 MM: month, value range 1--12, 2 characters 03 DD: day, value range 1--31, 2 characters 04 HH: hour, value range 0--23, 2 characters 05 mm: minute, value range 0-59, 2 characters 06 ss: second, value range 0--59, 2 characters Device can use the <u>date-time</u> to calibrate local date and time |
| Example | 210414055250: 2021-04-14 05:52:50 |
| Field | checksum |
| Description | Checksum of package, 2 bytes hexadecimal string format, XOR of {<pack-len>,<ID>,<work-no>,A03,<date-time>}. |
| Example | 5C The XOR checksum is 0x5C |
| Field | \r\n |

| | |
|-------------|-------------------------------|
| Description | End of package, i.e. <CR><LF> |
| Example | \r\n |

5 GPRS Heartbeat Data Format – A10

Heartbeat package is used to keep device online, under that condition, GPRS setting command can be delivered.

\$\$<pack-len>,<ID>,<work-no>,A10,<status>,<bat-ad>*<checksum>\r\n

Descriptions of position/alarm data:

| | |
|--|--|
| Example: ##29,866104023192332,36,A10,0,190*5E\r\n | |
| Field | pack-len |
| Description | decimal string format, the field of <i>pack-len</i> is {,<ID>,<work-no>,A10,<status>,<bat-ad>}, be careful, comma(,) in front of <i>ID</i> included. |
| Example | 29 |
| Field | ID |
| Description | Tracker ID, default IMEI, ASCII string |
| Example | 866104023192332 |
| Field | work-no |
| Description | working number, hexadecimal string format, cyclic accumulation from 1 to 0xFFFF |
| Example | 36, indicates that the value of <i>work-no</i> is 0x0036 |
| Field | A10 |
| Description | Data type specification, which is used to define GPRS heartbeat package format. |
| Example | |
| Field | status |
| Description | Reserved field |
| Example | |
| Field | bat-ad |
| Description | bat-ad: Voltage of internal battery, unit 0.01V |
| Example | 190: Voltage of battery is 0x01A0, i.e. 4.00V |
| Field | checksum |
| Description | Checksum of package, 2 bytes hexadecimal string format, XOR of {<pack-len>,<ID>,<work-no>,A10,<status>,<bat-ad>}. |
| Example | 5E The XOR checksum is 0x5E |
| Field | \r\n |
| Description | End of package, i.e. <CR><LF> |
| Example | \r\n |

6 Server Response to A10

There is no response package from server to device.

Appendix A - Alarm Code and Alarm Parameter

The following table describes the relationship of alm-code and alm-para in GPS Position/Alarm data:

| alm-code | alm-para | Description | SMS Head String |
|----------|----------|----------------------|-----------------|
| 2 | NULL | Input1 active | SOS |
| 33 | NULL | Exit Fence | Exit Fence |
| 34 | NULL | Enter Fence | Enter Fence |
| 17 | NULL | Internal battery low | Low Battery |
